Ahmad Alhomsy

Rukn Al-Deen, Sahat Shamdeen, Syria

Dear Hiring Manager,

As a Kid, I've always been drawn to computers and loved dealing with them, which is what lead to me further down the line to learning English and becoming proficient in it, and furthermore enter Computer Science Bachelor's study in Arab International University, ever since then I've been learning and improving myself in technical skills, specifically web development building websites in my free time and after coming back home from university, however hard skills weren't the only skills I worked on, I have joined and finished a number of courses like conversation skills and teaching skills at Milestone institute and gave numerous presentations in front of a public crowd, all of which lead me to this point right here applying to your position.

With half a year of professional experience working at OTOM8 (automate), I know how to build front and backend projects (full-stack), in my last role, I built many projects like a dynamic React form for clients to enter their data, a Jewelry E-commerce store using Wordpress, and also a complete dashboard for an IOT (internet of things) which stores information sent from sensors about electricity and other related details, a dashboard which is being used built and maintained to this day. I would love to bring both my technical and team working skills to help advance your growing team.

Thank you for your time and consideration.

I look forward to learning more about the front end Engineering position and your company's vision for this role.

Sincerely,

Ahmad Alhomsy
